

YSAN Workshop Day 2

Session: Urban Mobility

Subtheme: Infrastructure

10:45 - 12:00 PST

Questions to kick-start the discussion:

Who are the different stakeholders and actors that can drive the sustainable mobility plans in cities with respect to providing leadership, technical support, and resources for the formulation and implementation of strategies?

Are South-Asian cities designed to implement strategies like walkable cities, more use of bicycles, and public transport? If not, then what are the reasons behind this failure?
